**ABSTRAK**

**Tujuan Penelitian**

Angka Kematian Ibu di Wilayah Kerja Puskesmas Ujung Gading mengalami peningkatan dari tahun 2015 dengan 1 kasus menjadi 3 kasus di tahun 2016 dan 2017. Banyak catin yang belum mengetahui tujuan program ini. Penelitian ini bertujuan untuk mengevaluasi pelaksanaan program kesehatan reproduksi bagi calon pengantin di Wilayah Kerja Puskesmas Ujung Gading Kabupaten Pasaman Barat tahun 2018.

**Metode**

Metode penelitian kualitatif menggunakan pendekatan sistem. Penelitian dilakukan pada bulan Mei-September 2019 di Wilayah Kerja Puskesmas Ujung Gading Kabupaten Pasaman Barat. Penentuan informan secara *purposive sampling*. Informan utama berjumlah 1 orang yaitu penanggungjawab program catin sedangkan informan triangulasi berjumlah 8 orang, dan peserta FGD berjumlah 6 orang WUS.

**Hasil**

Hasil penelitian menunjukan pada komponen input: kebijakan Peraturan Nagari dan PMK, belum ada SOP, sudah ada tenaga yang bertanggungjawab, belum ada dana yang dialokasikan puskesmas, sarana dan prasarana sudah cukup memadai. Komponen proses: belum adanya perencanaan tingkat puskesmas, belum ada SK penanggungjawab, pelaksanaan berupa pelayanan pemeriksaan status gizi, konseling kespro, konseling gizi bila dirasa perlu pemeriksaan tes urine, imunsasi TT, serta pengawasan belum dilakukan secara berkala. Komponen output: belum berjalan optimal.

**Kesimpulan**

Pelaksanaan kesehatan reproduksi bagi calon pengantin belum optimal dari segi input, proses dan ouput. Diharapkan kepada Kepala Dinas Kesehatan Kabupaten Pasaman Barat untuk memperbaiki pelaksanaan program kesehatan reproduksi bagi calon pengantin.

**ABSTRACT**

**Research purposes**

The Maternal Mortality Rate in the Work Area of Ujung Gading Health Center has increased since 2015 from 1 case become 3 cases in 2016 and 2017. There were so many brides who still did not know about the purpose of this program. The aim of this research is to evaluate the implementation of reproductive health program for the future brides in the Work Area of Ujung Gading Health Center in West Pasaman Regency in 2018.

**Method**

Qualitative research methods using a systems approach. This research was conducted in May-September 2019 in Ujung Gading Health Center's Work Area, West Pasaman Regency. The determination of the informants was done by purposive sampling. The number of main informant was 1 person which was the person in charge of the program while the number of triangulation informants were 8 persons and the FGD participants were consisted of 6 women of childbearing age.

**Results**

The results showed in the input component: the policy in the form of Nagari and PMK Regulations, there is still no SOP, there is already a person in charge, no funds have been allocated by Health Center, and adequate facilities and infrastructures. Process components: there is no planning in the Health Centre; no SK for the person in charge, implementation in form of nutrition status inspection services, reproductive health counseling, nutrition counseling if necessary, urine test, TT immunization, and the control has not been done regularly. Output component: not running optimally

**Conclusion**

The implementation of reproductive health program for the future brides still not optimal in terms of input, process and output. It is expected that the Head of the Public Health Office in West Pasaman Regency to improve the implementation of this program.
